

Using the parking garage during a power outage:

Possible regional outages of the electricity distribution network also apply to parking garages.

It is possible to use the parking garages during power outages taking into account the following points/restrictions:

- 1.) Efforts are made to get **the lifting doors and the booms of the driving lines in the up position during breaks.**
- 2.) **The lights on the buildings are not working**, so take **special care** when driving and make sure that your car's lights are working and that they are being used properly. **Be especially careful on the role of a pedestrian.**
- 3.) **If the doors of the stairways / other pedestrian accesses are locked, pedestrians can get out and into to the parking garage via driveways with special caution. The elevators don't move.**
- 4.) **The ticket machines, automatic cashboxes and the Moovy application based on automatic camera recognition are out of use**, so the parking fee is not charged during the power outage.
- 5.) **The voice connection to customer service from automatic cashboxes and boom devices is not in use. With a normal phone connection you can reach our customer service round-the-clock at 020 743 6830.**
